LIFE WITH BIPOLAR

PEOPLE WITH BIPOLAR DISORDER SAY IT FEELS LIKE:

- Being misunderstood
- An amazing feeling that leads to feeling horrible
- You feel everything at once and then you are numb to the world
- Mania is speed. You must start and finish everything now—you can’t stop moving
- Busy brain, busy senses, busy libido
- Unending back and forth with yourself
- “Normal” people are annoying because you’ll never have that stability
- “You feel like you’re drowning in your own mind”
- Being on a see-saw of human emotion
- Flipping a switch in your mind
- Being constantly in activities that take up time with hardly any results or satisfaction
- Productive, carefree, and then exhausting
- The future quickly goes from bright to bleak
- Frightening to be so out of control and off-balance

BIPOLAR DISORDERS ARE REAL ILLNESSES THAT INVOLVE EXTREME SHIFTS IN MOOD CALLED MANIA AND DEPRESSION.

Share what life with bipolar disorder feels like for you in words, images or video by tagging your social media posts with #mentalillnessfeelslike.

Posts will be displayed at mentalhealthamerica.net/feelslike where you can also submit anonymously if you choose.

Speak up about your own experiences
Help others who may be struggling to explain what they are going through to figure out if they are showing signs of a mental illness
Break down the discrimination and stigma surrounding mental illnesses
Show others that they are not alone in their feelings and their symptoms

BIPOLAR DISORDER IS NOT:

- Moodiness
- Being overly emotional
- Having multiple personalities
- Being a “drama queen”
- Artistic, or for geniuses
- Violent
- Switching between happy and sad
- A choice
- A sign of weakness
- A character flaw

THOUGHTS

MANIA CHANGES:

- Causing: racing thoughts, unrealistic beliefs about one’s abilities, feeling invincible or “on top of the world,” excessive optimism or in severe cases, delusions and hallucinations.

DEFEREPRESSION CHANGES:

- Causing people to feel: inadequate (like they aren’t good enough), extremely sad, guilty, irritable, lonely, empty, pessimistic (having a negative outlook), preoccupied with death or suicide, unable to focus, or unmotivated.

BEHAVIORS

MANIA CHANGES:

- Causing: rapid speech, restlessness, extreme irritability, less sleep, impulsivity, engagement in risky activities, or taking on more projects or activities than usual.

DEFEREPRESSION CHANGES:

- Causing: withdrawal from social activities, decreased interest in sex, slowed speech, difficulty finishing (or even starting) tasks, or not keeping up with daily responsibilities.

OVER 3,300,000
OR 1.7% OF AMERICAN ADULTS BETWEEN THE AGES OF 18-64 WILL HAVE BIPOLAR DISORDER IN A GIVEN YEAR.¹

THAT’S MORE THAN THE POPULATIONS OF:

- SAN FRANCISCO
- SEATTLE
- NASHVILLE
- INDIANAPOLIS
- NEW ORLEANS

2. U.S. Census Bureau, American Community Survey, 2019-2020
TIPS FOR TACKLING BIPOLAR DISORDER

Learn from others who have bipolar disorder. Find a peer support group where people meet to share resources and provide support based on their histories and personal knowledge. You can find peer support groups through mental health organizations in your area, like your local MHA affiliate (mentalhealthamerica.net/find-affiliate).

Be aware of your personal patterns. Is there something that you start or stop doing a few days before symptoms of mania or depression go into full effect? Once you identify your patterns, ask a friend or family member to help alert you when you start to show early signs.

Keep a mood journal. Write a little about what happened and what kind of mood you were in each day. By doing so you’ll be better able to monitor changes, identify potential triggers, and keep track of what helps you to feel good.

Make a routine and stick to it as much as possible. Try to wake up, eat, and go to sleep at the same times every day to get your body operating at a steady rhythm. Don’t forget to block off time for things you enjoy doing!

Be careful when it comes to substances. Stimulants like caffeine and nicotine can interfere with sleep and intensify mania. Drinking alcohol can trigger mood changes, worsen depression, and interact with medications commonly used to treat bipolar disorder.

Embrace exercise. Physical activity is great for your mind and body. During times of mania, exercise is a positive way to use your extra energy and may help you to sleep better. During times of depression, exercise helps lift mood by releasing endorphins into your blood stream. No need to spend hours at the gym; a simple 15-minute walk can help.

Know when to seek professional help. There are things you can do to manage symptoms, but if you find that you’re having symptoms more often or that they are getting worse, doctors and therapists can help.

Add Omega-3 fatty acids to your routine. Omega-3s (found in fatty fish) have been shown to be effective in reducing mood changes in people with bipolar disorder. Omega-3s are also really good for your body in general!
